Professional Summary

Software Engineer with 1+ year of professional experience developing and supporting production web applications using C#, ASP.NET Core, SQL Server, Next.js, and React. Hands-on experience in REST API development, business logic, database programming, authentication and authorization, frontend integration, third-party APIs, logging, and production troubleshooting. Contributed to production systems across CRM, WhatsApp automation and configuration, enterprise asset management, finance, project management, booking, and e-commerce domains. Experienced with application deployment and support using IIS/NSSM on Windows and Nginx/PM2 on Linux.

Technical Skills

Backend: C#, ASP.NET Core, .NET, Entity Framework Core, ADO.NET, REST APIs

Frontend: Next.js, React.js, TypeScript, Tailwind CSS

Database: Microsoft SQL Server, Stored Procedures

Security & APIs: JWT Authentication, Role-Based Access Control, API Validation, Payment Gateway Integration

Deployment: IIS, NSSM, Windows Server, Ubuntu/Linux, Application Logs

Tools: Git, GitHub, Postman, Visual Studio, VS Code, Swagger

Professional Experience

Voleergo Solutions LLP

Ernakulam, Kerala, India

Technical Lead

Jul 2026 – Present

- Continue hands-on software development while taking on additional technical responsibilities across production applications.
- Contribute to backend and full-stack development using ASP.NET Core, C#, SQL Server, Next.js, React, and REST APIs.
- Review implementation and code quality, assist with technical problem solving, and guide developers on backend, frontend, API, and database development practices.
- Participate in application security and production-readiness checks covering authentication, authorization, API validation, dependencies, logging, and configuration.
- Support production deployment and troubleshooting across Windows/IIS and Linux/Nginx environments.

Software Engineer

Sep 2025 – Jul 2026

- Developed and maintained production REST APIs using ASP.NET Core and C# for CRM, booking, e-commerce, payment, and business management workflows.
- Developed SQL Server functionality using T-SQL stored procedures, queries, transactions, validation logic, and data access patterns.
- Implemented JWT authentication, role-based authorization, refresh-token workflows, API validation, rate limiting, audit trails, and application logging.
- Developed Next.js and React frontend features and integrated them with backend APIs for customer, administrative, and business workflows.
- Worked on CRM and lead management, WhatsApp automation, finance workflows, role and permission management, project management, booking, and e-commerce features.
- Supported production deployment and troubleshooting using IIS/NSSM on Windows and Nginx/PM2 on Linux.

Software Trainee

Jun 2025 – Sep 2025

- Contributed to application development using ASP.NET, SQL/Stored Procedures, APIs, and frontend technologies.
- Worked on application features, database operations, debugging, and API integration while learning production development practices.

Projects

ServiceApp – Automated Service Management System

Personal Project

- Built a full-stack Uber-like platform for home services (electricians, plumbers, cleaners) from scratch using ASP.NET

MVC .NET 8, SQL Server, and Entity Framework Core across a 5-project clean architecture solution (Core, Data, Services, Infrastructure, Web).

- Implemented a strict status-machine service lifecycle (Pending → Assigned → InProgress → Billed → Completed) enforced entirely in the service layer, with every transition logged in a ServiceHistory audit trail using the Repository pattern and Unit of Work transactions.
- Integrated Razorpay payment gateway with HMAC SHA256 signature verification, idempotent payment processing, and real Razorpay refund API calls via direct HttpClient (bypassing a known SDK bug); also implemented a dispute resolution system with 48-hour SLA tracking.
- Built a Hangfire background auto-assignment engine that runs every 2 minutes, matching pending requests to the best available technician by skill, rating, and multi-city pin code zone; implemented SignalR real-time push notifications.
- Developed a technician earnings wallet (commission tracking, withdrawal requests), QuestPDF invoice generation, and SendGrid transactional emails; also ported the platform to a Flutter mobile app.

VoleergoCRM – Business Management Platform

Production Project

- Contributed to a production business management platform covering CRM, WhatsApp configuration and automation, finance, role and permission management, and project management.
- Developed backend APIs and business logic using ASP.NET Core and C#, with SQL Server and T-SQL stored procedures for database operations.
- Worked on lead management, follow-ups, lead conversion, task assignment, WhatsApp workflows, financial transactions, role-based access, and project workflows.
- Contributed to Meta WhatsApp API integration, template management, audience creation, and broadcast messaging.

Enterprise Asset Management System

Production Project

- Contributed to an enterprise Asset Management System for managing organizational assets and operational workflows.
- Worked on backend APIs, SQL Server stored procedures, business logic, authentication, authorization, audit trails, and frontend integration.
- Contributed to asset custody, transfers, write-offs, configuration, users, permissions, stock, and asset-related workflows.

Booking & Payment Platform

Production Project

- Developed and supported booking workflows for packages, time slots, customer bookings, administrative management, and payment processing.
- Developed ASP.NET Core APIs and SQL Server database workflows and integrated them with a Next.js frontend.
- Implemented authentication, authorization, validation, booking workflows, and payment gateway integration.

E-Commerce Platform

Production Project

- Contributed to an e-commerce platform covering product, inventory, user, order, and payment workflows.
- Developed ASP.NET Core APIs, SQL Server database operations, authentication, authorization, and Next.js frontend functionality.

ApplyEngine – AI-Assisted Job Application Platform

Personal Project

- Built an AI-assisted job application platform using ASP.NET Core, SQL Server, Next.js, and LLM integration.
- Developed workflows for processing job information, evaluating opportunities, generating application-related content, and tracking applications.
- Built a Next.js/React dashboard for reviewing opportunities and application history.

Education

Ilahia College of Engineering & Technology

2023 – 2025

Master of Computer Applications (MCA)

CGPA: 8.67/10

Prajyoti Niketan College

2020 – 2023

BSc Electronics

CGPA: 6.65/10

Certifications

- Cloud Computing – NPTEL Swayam

Additional Leadership

- **Technical Mentor:** Mentored interns on backend and frontend development, including ASP.NET Core, REST APIs, Next.js, React, and clean coding practices.
